The GamesOnTrack product program is targeted at model railway groups which want to build and rebuild their layouts quickly, save wires, and drive intensively using automations as well as manual drive also including voice control.

The innovative indoor GPS-system in GT-Position copies the outdoor real worlds GPS to model railways with exact positions of trains on the layout thus saving the wire based traditional feedback system.

Rüdiger Uhlenbrock, Uhlenbrock Elektronik GmbH: “We have established a well functioning relationship with GamesOnTrack. Their innovative products extend our existing product portfolio and are an interesting offer for all model railroaders.. We are happy to launch GT-Command and GT-Position with all our dealers in Germany. Throughout the last 6 months we have build a strong in house capability to support the program in the German market. We look forward to see how this program can simplify and reintroduce model trains in the younger generation, and we expect GamesOnTrack can continue to introduce more innovations along these lines in the years to come”.

Niels Bo Theilgaard, GamesOnTrack A/S: “Uhlenbrock Elektronik GmbH represents an ideal partner for us in Germany. With Uhlenbrock’s strong dealer network and with Uhlenbrock’s well recognised technical capacity the customers can rely on support for our new products. The smooth integration with the whole Uhlenbrock Digital product program is a powerful combination for existing and new customers. GamesOnTrack becomes an intelligent way to launch new products, games, and services in the model train - and model car world. Although the distribution agreement is for Germany the customers outside will also benefit from our cooperation.”

With GT-Position you need two wires for the layout: Red and brown. And you can quickly build a layout, draw it up automatically, automate it with blocks etc, and tear it down and build a new one.
