

Stay on guard with Wiley X

Imagine a pair of shooting glasses that help to cure cross-eye dominance and also offer military standard protection for your eyes. Imagine no longer, because that product exists, thanks to Wiley X.

Regular readers of Gun Trade World should by now be familiar with the world of Wiley X and the unique benefits it offers to hunters and shooters from around the world. The company provides effective solutions to many of the practical problems and safety hazards of shooting. One prime example of this is the Wiley X Guard Advanced model.

This top frame, split lens design is perfect for helping to cure cross-eye dominance, which is a problem that can plague any shooters accuracy. It also features Wiley X's unique shatterproof Selenite lenses, which meet

MIL-PRF324532(GL) ballistic standards. What does this mean? Essentially your eyes will protected to the same standards required by military personnel around the world.

The lenses also benefit from T-Shell anti-scratch hard coating, ensuring they last a long time as usable eyewear – the lenses are also interchangeable with smoke grey or light rust colours available. It houses an X-lock locking nosepiece to make this interchange easy.

The temple and tip areas of the glasses are made from a double-injected material that offers

incredible comfort and security and the glasses are also supplied with a carrying strap and hard case.

Available in two different combinations: 4004 Matte black frame – clear and smoke grey lenses or 4006 Matte black frame – clear, smoke grey and light rust lenses. **GTW**

CURING CROSS-EYE

When shouldering the gun to your right shoulder and aiming with your left eye being your master eye, this is cross eye domination. It is the same story, if you shoulder the gun to your left shoulder and aim using your right eye as your master eye.

Cross eye domination can in most cases be "cured" by using Wiley X protective eyewear. Wiley X Ballistic, ANSI rated and EN.166 certified lenses provide a true spatial relationship of objects in the field of view. By mounting a smoke grey colored lens in front of the dominant eye and a light rust colored lens (contrast enhancement color) in front of the other eye, the domination will in most cases change to the other eye and thereby solve the cross eye problem.

This provides the following advantages:

- No cross eye domination
- 100% eye protection
- 100% distance evaluation
- 100% field of view
- RX ready (prescription)
