

# SUSTAINABILITY IS PART OF OUR DNA

*“Towards 2030, we will work strategically with the UN’s 17 sustainable development goals”*

## CAST IRON FROM TASSO IS THE SUSTAINABILITY OPTION

Taking care of the planet is a joint responsibility, and requires that **we all think sustainably**. This applies in our private lives, and in business. The more resources a company consumes, the greater the responsibility it has to be sustainable. This attitude guides everything we do.

At Tasso, sustainability is part of our DNA. Our cast iron production process requires large amounts of energy and produces waste.

We have therefore spent the last 10 years reducing and optimising the process to such an extent that choosing Tasso’s cast iron today means choosing sustainability.

## FROM BLACK TO GREEN ON ALL FRONTS

In the past we have paid fees to deposit production waste in landfill. **The need for landfill has now been reduced to zero**. The majority of our waste is recycled. Some is even used for new products made by ourselves or by external recipients – as locally as possible.

## ANALYSES SHOW THE PATH FROM WASTE TO VALUE

Analyses show the path from waste to value. A waste product like slag is now sorted and recycled for re-use, where we used to have to pay for landfill. The same is true of flammable waste. Much is recycled – including in new products – so that costs are transformed into income.

As an iron foundry we naturally have a high energy consumption. The challenge of finding ways to save has been enthusiastically taken up in literally every corner of our business. For example, **surplus heat** from melting and casting **provides district heating for 250 households**.

## SUSTAINABILITY FOR BUSINESS AND THE FUTURE

As we have optimised and increased our production significantly over many years, we have also reduced our consumption and waste dramatically. This has led to major savings and added to our earnings.

Sustainability makes our business stronger, while also protecting the future.

## CERTIFICATION ENSURES CONSTANT OPTIMISATION

Certifications and partners document our sustainability efforts. Third-party auditing confirms that we are continually improving our quality, energy optimisation and working environment.

## NEW GOALS KEEP US IMPROVING

At Tasso, every aspect of consumption and production is strictly managed to ensure that nothing goes to waste. We constantly set new goals, to become even better. Towards 2030, we will work strategically with the **UN’s 17 sustainable development goals**, with a strong focus on responsible consumption and production.

## CHOOSE GREEN SUPPLIERS

A green profile is only authentic if it applies all the way from procurement to the final product. A company is therefore only as sustainable as its suppliers.

**Tasso has opted for sustainability.**

## WHAT WILL YOU CHOOSE?
