

# Protecting your eyes, improving your vision

Wiley X has long had a reputation for protecting a shooter's eyes but its latest offerings ensure your vision is boosted too.

There are many glasses designed to keep your eyes safe when shooting while also ensuring your vision is spot-on, whatever the light conditions or situation you find yourself in.

However, Wiley X is the only producer in the world that manufactures ballistic-proved models for hunters and shooters, making their choice a no-brainer for anyone in these sports.

Joining Wiley X's 2016 product family is the prescription-ready Changeable Series WX Rogue, designed to deliver a clean line of sight, superior coverage and excellent peripheral vision.

Wiley X Changeable models have a unique ability to quickly and easily switch lenses to provide optimum vision and performance – perfect when you are facing changing light conditions or find yourself in unfamiliar situations.

The 2016 WX Rogue is offered in two or three-lens interchangeable kits featuring Wiley X's T-Shell scratch-

resistant and Foil anti-fog coated Selenite polycarbonate lenses.

The WX Rogue's lightweight matte black half frame also boasts an adjustable, wire-core, rubberised nose bridge for a secure, comfortable fit.

## SAFE AND SOUND

Of course, these latest models uphold Wiley X's long-standing reputation for absolute premium protection – each meets ANSI Z87.1 high-velocity and high-mass-impact safety standards for OSHA-rated vision protection as well as EN.166.F. All Wiley X models for hunting and shooting, including the new WX Rogue, also meet US military MIL-PRF-32432 (GL) standards for ballistic eye protection.

To meet this test, both the frame and lens must withstand a 3.8mm projectile fired at 700 to 720km/h.

Wiley X is the only premium hunting and shooting eyewear brand with this level of protection

in every pair of hunting and shooting eyewear that it makes – a key reason why the company is a long-time provider of protective eyewear for hunters and shooters as well as the US military, law enforcement and other tactical wearers all across the globe.

## PTX INSERT

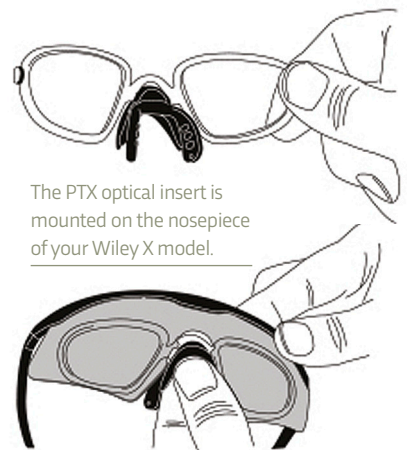

Wiley X also offers the PTX insert, which is mounted on the nosepiece behind the front lens, providing the hunter with a number of advantages.

Not only is it easier and cheaper to replace an outer lens that has no prescription but it also offers the user up to three front colour lens options (smoke grey, clear and light rust) – allowing the shooter to adjust to any given light condition.

Whether you need the Rx insert or not, in either format you still get the same level of safety and ballistic impact protection.

Finally, the PTX insert matches a number of Wiley X

models, including the new WX Rogue, Saber Advanced, PT-1 and WX Vapor. It doesn't get any easier than that. **GTW**

The PTX optical insert is mounted on the nosepiece of your Wiley X model.
