Main Catalogue

## Counterbore holders for Magnetic drills type MD

Based on increasing requests, Granlund has developed a 19,05 (3/4") / 90 degree Weldon standard holder, that is the most common holder for Magnetic Drills.

These holders are available in System sizes 0, 1 and 2.

## New inserts type U

The new U (Universal) inserts are produced with a modern coating and a much more wear resistant substrate for universal applications. Beside from normal machining of steel, the insert has been well approved in applications such as HARDOX™ as well as machining of Stainless.

## Long holders with Weldon

After the success with the 1L-500 and 2L-500 cylindrical 500 mm holders, we now fill the gap between those and the longer MT holders.

3 new holders with the length 250 and Weldon are introduced in the series 0,1 and 2.

0L-250-W16

1L-250-W20

2L-250-W25

## New insets type SA

The new SA-insert for machining of stainless steel and aluminium, has a sharp cutting edge and a coating optimized for machining of stainless.

## New countersink family type 405

The 405 family is a ground 3 flute countersink with differential pitch. This makes the countersink run very smooth with reduced vibrations. It is supplied both as TIN coated as well as uncoated.

Read more about these on page 25.

## New HSS drill for machining of Hardox™

We can now proudly present HSS Drills specially developed for machining of HARDOX™. On the side of our Carbide drill Thunder for HARDOX™, this is a much requested drill, as many operations in HARDOX™ are made in machines that are not suitable for solid carbide tools. The drills are available from 10-40 mm. The drills all have morse taper shank.

More information on page 35.

## ISO Colours highlighting different materials added in charts

In order to enhance the difference between materials in our cutting data tables, we now have applied the ISO colours and symbols, such as P for steel, M for stainless, K for cast iron, etc.

HSS Feed mm/rev.	Speed m/min	mm/rev.	Material
0,05 - 0,3	10 - 35	0,05 - 0,3	Steel
0,05 - 0,3	10 - 35	0,05 - 0,3	Cast Steel

0,05 - 0,3	40 - 80	0,05 - 0,3	Copper
0,05 - 0,3	20 - 80	0,10 - 0,3	HARDOX

We reserve the right to modify any specification and/or item shown in the present catalogue without notice.

Information, photos, drawings and technical data specified in the publication have been carefully examined and thoroughly checked. They cannot, however, bind our responsibility on their exactness.

GRANLUND TOOLS AB, SWEDEN

The company is certified according to ISO 9001 and ISO 14001.

# Our Story

Many years ago, to be specific in the early 1945, two skilled metalworkers and foremen were laid off their work at a factory in Gävle. The factory had gone bankrupt and now as a last effort it paid out a reasonable end salary to the best foremen they had. The men were Hilmer Granlund and Börje Gyllhamn.

They were now thinking of what to do next. Johan Nordström, a friend of theirs had bought a factory building in Eskilstuna and suggested them to start business, the three of them. Said and done, they moved to Eskilstuna and started GNG (Granlund, Nordström and Gyllhamn).

Business was picking up and they had work 24/7 due to the infinite demand after the war. Unfortunately, Granlund passed away only one year later at the age of 37. Gyllhamn then bought Granlund's GNG shares from his mother. They also changed the name to H. Granlund & Co in honour of Granlund.

In 1948 Gyllhamn acquired the shares from Nordström, (who a couple of years later founded the company Johan Nordström Verktygsmaskiner AB).

In the coming years, the tool business was developing rapidly, and the export accelerated. Today the export stands for more than 70% of the business.

Since 1948 the company has been a fully family-owned business, and now the third generation operates the business.

## Today

Today Granlund Tools is still located in Eskilstuna, Sweden. Granlund is a world-leading manufacturer of precision cutting tools for facing, counterboring, chamfering and backspotfacing. 95% of all tools are manufactured inhouse.

With representation in more than 30 countries, Granlund is a very experienced tool supplier. Granlund has over the years established a well-trimmed and extensive network of distribution as well as a unique and well-established trademark – an obliging trademark!

## One plus one may make more than two

One of Granlund Tools' most known products is the interchangeable counterboring system. With only 1300 parts, consisting of holders, cutters, drills and pilots, it is possible to assemble combination tools in more than 1 500 000 separate variations.

Interchangeability is also applicable for other parts of the Granlund Tools' program. For example by the backspotfacing system, consisting of two parts, and the spirabor system with 4 parts. The interchangeability idea is very important also for the development of new tools. We have indeed experienced that one plus one most often make more than two. Granlunds wide tool program suits both modern and older machines.

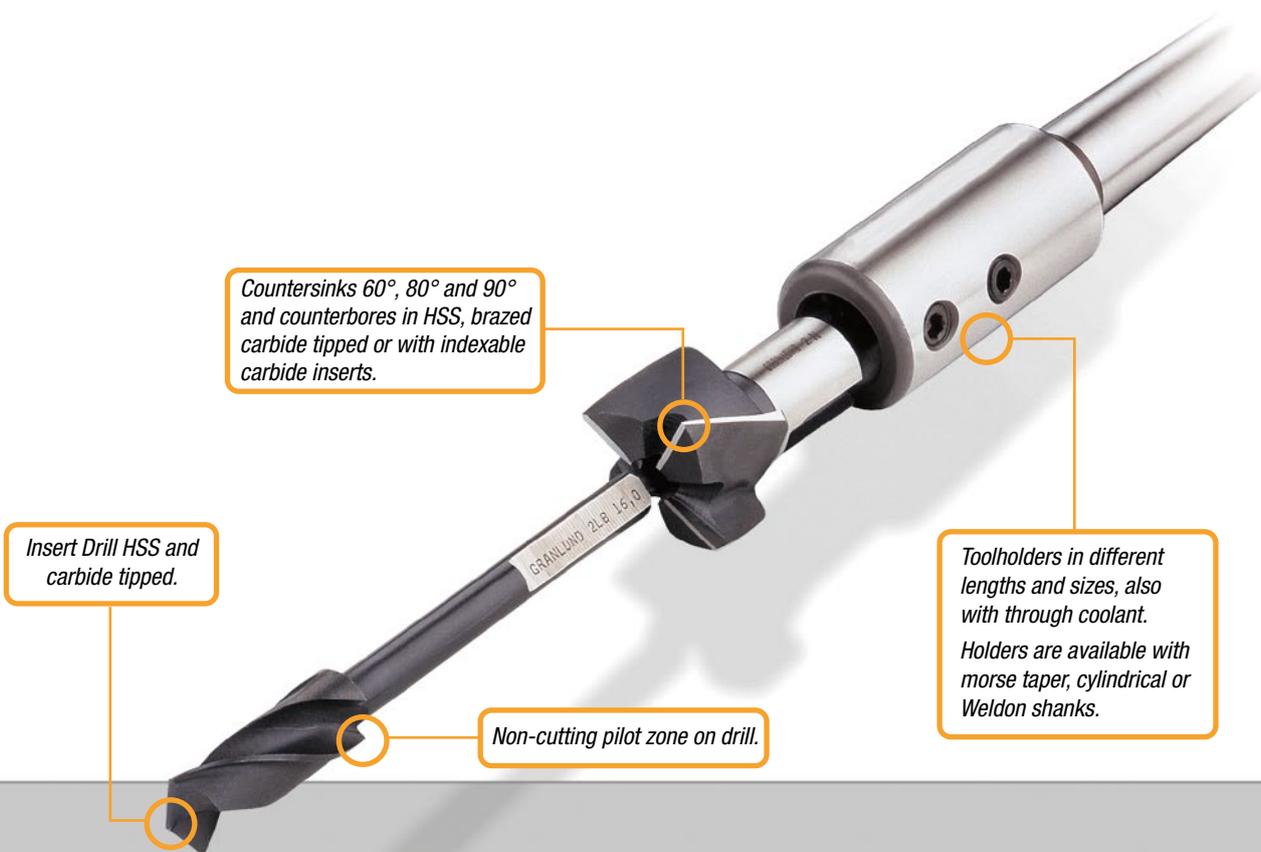

*Standing from left, Johan Nordström and Börje Gyllhamn  
Sitting, Hilmer Granlund - 1945.*

*Eric Gyllhamn, Operational Manager in third generation.*

## Your problem is our challenge

Granlund Tools face problematic machining every day. We have extensive and proven experience with difficult machining, tough materials, advanced special profiles etc. We are proud to say that we are among the best in the world at what we do.

Countersinks 60°, 80° and 90° and counterbores in HSS, brazed carbide tipped or with indexable carbide inserts.

Insert Drill HSS and carbide tipped.

Non-cutting pilot zone on drill.

Toolholders in different lengths and sizes, also with through coolant. Holders are available with morse taper, cylindrical or Weldon shanks.

# The Granlund System

Granlund's unique tool system for countersinking and counterboring helps you to increase productivity and lower your costs.

Our toolholders, counterbores, insert drills and pilots may be combined to fit all types of machines and applications.

You can, with only 1300 parts, easily build more than 1 500 000 special tools.

The system is grouped into 4 sizes: size 01, size 0, size 1 and size 2. All combinations have to be made with elements belonging to the same group size. Groups are not interchangeable.

The range of tools available for each group size along with recommendations for correct tool selection and cutting data can be found in the following pages.

## Tool selection

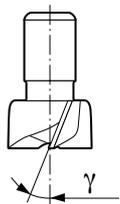

This table shows pictures of each type of tool and its diameter range within each size (01,0,1,2). Make your tool combination by choosing components from the same size.

Special editions: Insert drills and counterbores HSS all dimensions and system sizes are "Uncoated Blank" as standard. Coatings: TiN, TiCN, FUTURA, HARDLUBE are additional. For price and delivery time, contact your Granlund representative.

### B, LB and BH

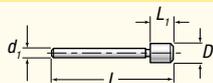

Type	d <sub>1</sub>	L	L <sub>1</sub>
B, BH	4,0	70,0	15,0
LB	4,0	82,0	27,0

#### Important!

- When using insert drills, the drill must drill through before the countersink/countersink starts to cut. Insert drill must not be used in blind holes.

### F and R

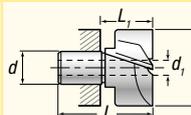

Type	d <sub>1</sub>	L	L <sub>1</sub>
F, R	4,0	64,0	9,0

#### Important!

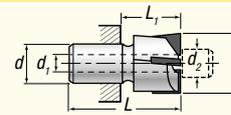

- When working "dry" type R roller pilots must be lubricated.

### N, NA och W

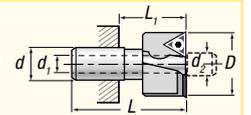

Type	d	d <sub>1</sub>	d <sub>2min</sub>	L	L <sub>1</sub>
N, NA, W	10,0	4,0		40,0	22,0
H, HA, WH	10,0	4,0	5,8	40,0	22,0
WHV	10,0	4,0	5,2	40,0	22,0

### H and HA

### WHV

#### Important!

- The counterbore WHV Rotatip should always be used combined with type R roller pilots.

Shank	Part No.
W19,05	OMD

**Important!**

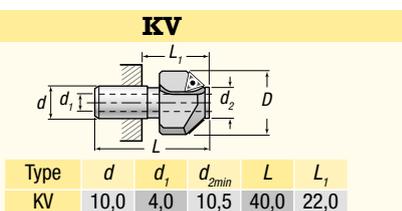

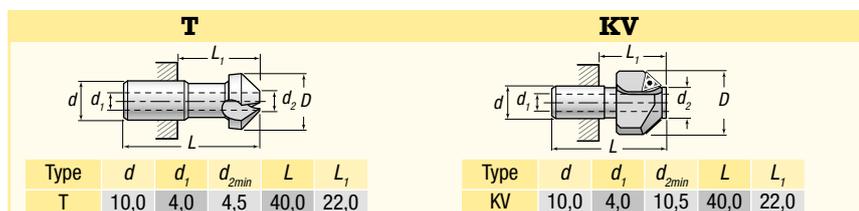

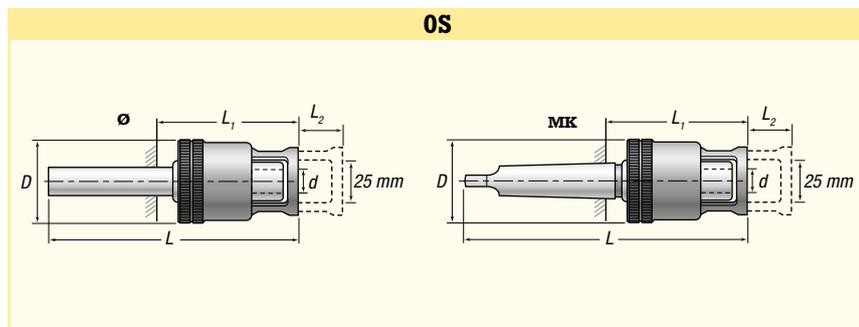

- When using carbide cutters – types TH, H and HA – set the axial adjusting screw to contact the shank of inserted pilot or drill.
- Allow a gap between the shoulder of the pilot/drill and the carbide cutting edges to prevent damage by accidental impact.
- The adjusting screw is also used to extend the life of insert drills after regrinding.

**Insert for WHV and KV**

Type of insert	Size	Part No.	Part No.	Radius	Suitable for	SSK
WHV 18,0 - 20,0 KV 20,0 - 25,0	07	TPMT-07U	TPMR-07U	0,4	Universal	20
	07		TPMR-07U	0,4	HARDOX	
	07	TPMT-07SA		0,4	Stainless	
	07	TPMT-07SA		0,4	Aluminium	

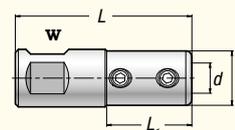

The GRANLUND inserts have special chipbreaker angle for optimum chip control.

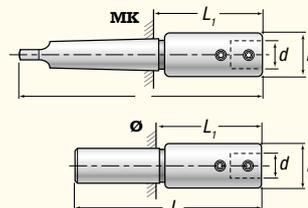

**Important!**

- The countersinks KV should always be used combined with type R roller pilots.

38,0	1N-38,0*	1NA-38,0*		1H-38,0*	1HA-38,0*	1WHV-38,0

## B, LB and BH

Type	d <sub>1</sub>	L	L <sub>1</sub>
B, BH	6,0	95,0	25,0
LB	6,0	110,0	40,0

### Important!

- When using insert drills, the drill must drill through before the countersink/countersink starts to cut. Insert drill must not be used in blind holes.

## F and R/RS

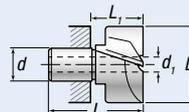

Type	d <sub>1</sub>	L	L <sub>1</sub>
F, R	6,0	80,0	14,0

\* 1R < Ø10 mm, L1=9,0 mm

### Important!

- When working "dry" type R roller pilots must be lubricated.

## N, NA and W

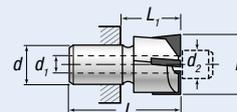

Type	d	d <sub>1</sub>	d <sub>2min</sub>	L	L <sub>1</sub>
N, NA, W	14,0	6,0		48,0	28,0
H, HA, WH	14,0	6,0	8,0	48,0	28,0

### Important!

- Counterbores N, NA, H and HA Ø 30 mm and larger are all made with a driving lip. These sizes should be used in the appropriate type M toolholder.

## H and HA

Type	d	d <sub>1</sub>	d <sub>2min</sub>	L	L <sub>1</sub>
WHV	14,0	6,0	7,6	48,0	28,0

### Important!

- The counterbore WHV Rotatip should always be used combined with roller pilots. The shank of the holder must not be smaller than MT2. The minimum size of the pilot shall be Ø 11 mm for counterboring and Ø 6 mm for spotfacing.

**Important!**

- When using carbide cutters – types TH, H and HA – set the axial adjusting screw to contact the shank of inserted pilot or drill.
- Allow a gap between the shoulder of the pilot/drill and the carbide cutting edges to prevent damage by accidental impact.
- The adjusting screw is also used to extend the life of insert drills after regrinding.

**B, LB and BH**

Type	d <sub>i</sub>	L	L <sub>i</sub>
B, BH	10,0	125,0	30,0
LB	10,0	145,0	50,0

**Important!**

- When using insert drills, the drill must drill through before the countersink/counterbore starts to cut. Insert drill must not be used in blind holes.

**F and R**

Type	d <sub>i</sub>	L	L <sub>i</sub>
F, R	10,0	110,0	20,0

**Important!**

- When working "dry" type R roller pilots must be lubricated.

### T, TH and TK

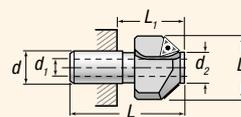

Type	d	d <sub>1</sub>	d <sub>2min</sub>	L	L <sub>1</sub>
T (-Ø50)	22,0	10,0	10,8	61,0	33,0
T (Ø60)	22,0	10,0	22,0	61,0	33,0
T (-Ø70)	22,0	10,0	37,0	61,0	33,0
T (Ø85)	22,0	10,0	44,0	61,0	33,0
TH (Ø40)	22,0	10,0	14,0	61,0	33,0
TH (Ø50)	22,0	10,0	14,0	61,0	33,0
TH (Ø60)	22,0	10,0	22,0	61,0	33,0
TK (Ø30,37)	22,0		5,0	61,0	33,0
TK (Ø40,45)	22,0		8,0	61,0	33,0
TK (Ø50-)	22,0		10,0	61,5	33,0
TK (Ø60)	22,0		13,0	65,0	33,0
TK (-Ø75)	22,0		25,0	67,0	33,0

**Important!**

Countersinks TH, TK, T Ø 50 are made with a driving lip. These sizes should be used in the appropriate type M holder.

### KV

Type	d	d <sub>1</sub>	d <sub>2min</sub>	L	L <sub>1</sub>
KV (Ø32)	22,0	10,0	17,0	61,0	33,0
KV (Ø35)	22,0	10,0	18,0	61,0	33,0
KV (Ø38)	22,0	10,0	18,0	61,0	33,0
KV (Ø40)	22,0	10,0	18,0	61,0	33,0
KV (Ø41)	22,0	10,0	24,0	61,0	33,0
KV9 (Ø50,60)	22,0	10,0	22,0	61,0	33,0
KV6 (Ø50)	22,0	10,0	29,0	61,0	33,0
KV6 (Ø60)	22,0	10,0	33,0	61,0	33,0

**Important!**

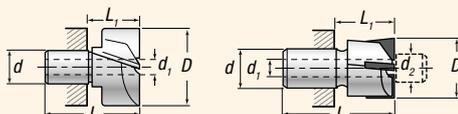

The countersink KV conotip should always be used combined with type R roller pilots. Minimum shank size is MK3.

### N, NA and W

### H and HA

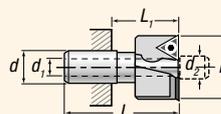

**Important!**

Counterbores N, NA, H and HA Ø 50 mm and larger are all made with a driving lip. These sizes should be used in the appropriate type M toolholder.

Type	d	d <sub>1</sub>	d <sub>2min</sub>	L	L <sub>1</sub>
N, NA, W	22,0	10,0		61,0	33,0
H, HA, WH	22,0	10,0	12,0	61,0	33,0

### WHV

Type	d	d <sub>1</sub>	d <sub>2min</sub>	L	L <sub>1</sub>
WHV 34-45	22,0	10,0	14,8*	61,0	33,0
WHV 46-75	22,0	10,0	15,5*	61,0	33,0
WHV 75	22,0	10,0	17,0*	61,0	33,0

**Important!**

The counterbore WHV Rotatip should always be used combined with type R roller pilots. The shank of the holder must not be smaller than MT3.

**Important!**

- When using carbide cutters – types TH, H and HA – set the axial adjusting screw to contact the shank of inserted pilot or drill.
- Allow a gap between the shoulder of the pilot/drill and the carbide cutting edges to prevent damage by accidental impact.
- The adjusting screw is also used to extend the life of insert drills after regrinding.

\* For stainless. \*\*According to DIN 74, Form B fine.

## What's new?

New design with extreme differential pitch, eliminates vibrations and reduces axial and radial forces. Makes an improved result by countersinking.

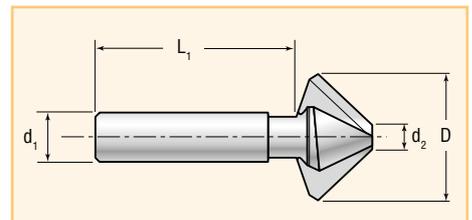

All dimensions according to DIN 335C

As always on Granlund-countersinks... Three grinded flats on the shank to improve the grip in drill chucks. Available on shank diameters 8, 10 and 12 mm.

powered by water

## The waterdriven backspotfacer developed by Granlund Tools

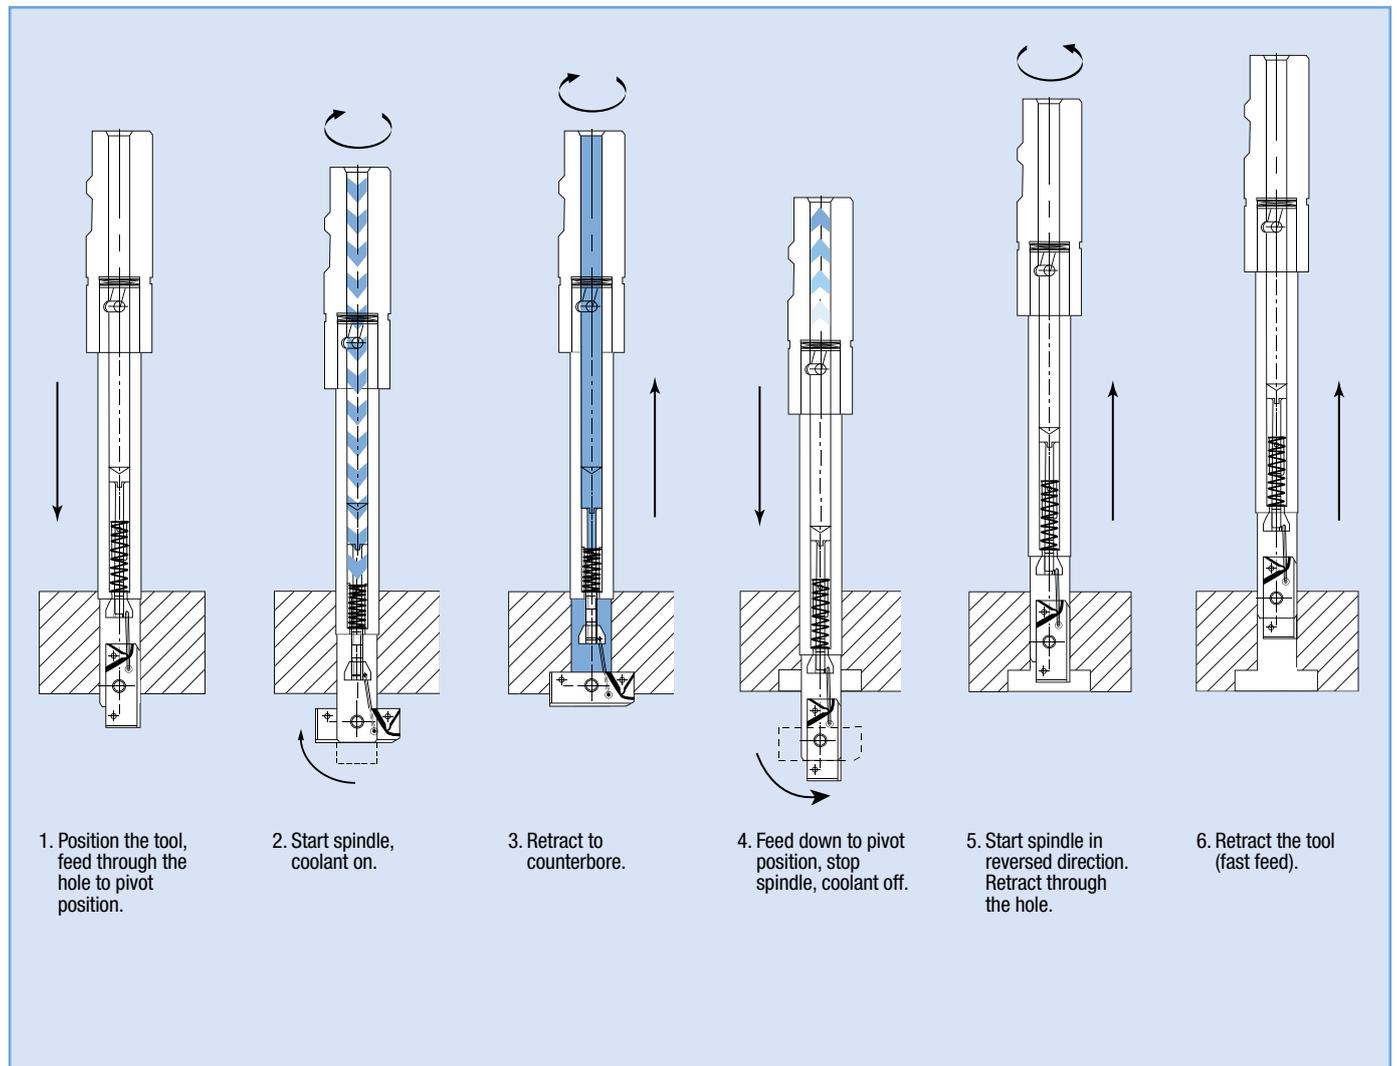

With the Neptune backspotfacer you can produce spotfaces of up to 2 times the diameter of the hole. As a special the tool can be manufactured for an even wider range.

Neptune is powered by coolant through the spindle. It operates using a piston in the shank, which pushes the insert holder out.

The Neptune is a combination tool, where you can strip, and clean the parts, change insert holder for another dimension etc.

The tool is also equipped with an “emergency” function. The shank separates from the holder in case the insert holder doesn’t retract properly. The spindle needs to be reversed during retraction after the spotfacing to ensure that the emergency function operates.

All friction parts are coated with a low friction coating to ensure the function of the tool.

## Cutting data for backspotfacer type NE

Workpiece	Speed	Feed
Steel <450 N/mm	50-100 m/min	0,05-0,15 mm/rev.
Steel <600 N/mm	60-110 m/min	0,05-0,15 mm/rev.
Steel <1000 N/mm	50-100 m/min	0,05-0,15 mm/rev.
Cast iron	80-100 m/min	0,10-0,15 mm/rev.
Cast aluminium	80-150 m/min	0,05-0,15 mm/rev.

## Operating reversed during retraction

Speed	Feed
400 rpm	500 mm/min

### Application example:

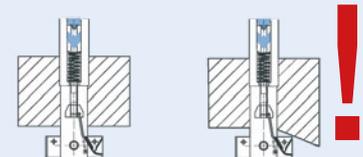

Tool:  
NE-17,0/33,0  
 Workpiece:  
SS 1672 t=33 mm  
 Spotface: 3 mm

## Sparepart kit

Typ	1 set contains:	
NESK-13	2 x Link	1 x Distributor
NESK-15		
NESK-17		
NESK-19	1 x Spring	1 x Screw
NESK-21		
NESK-23		
NESK-25	2 x Axle	4 x Nut
NESK-33		

### CAUTION!

Do not operate the tool as single flute. If there is to be any intermittent cutting the feed rate should be reduced by at least 50%.

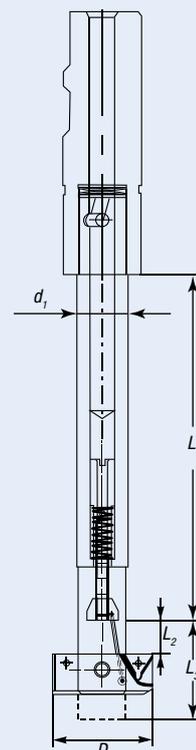

## NEPTUNE

NE-33,0/61,0		SSK-40	33	61	140	30	61	40

### Important!

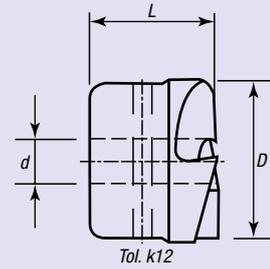

- Coolant through the spindle or by means of a coolant adapter is required to operate the tool. For reliable operation the pressure should be  $\geq 3$  bars and the flow  $\geq 30$  l/min. Before using the tool, make sure that the insert holder pivots freely, lubricate and clean if necessary.

## Guide to quick reamer selection

### Select diameter and tolerance

Standard sizes are delivered preset to +0,008 mm from min. diameter of tolerance H7 with an uncoated insert.  
The standard sizes will produce holes according to the nominal diameter of the reamer and with H7 tolerance.  
The adjustability of the reamer can be used to increase the tolerance band or for fine- adjustment within a certain tolerance.  
Intermediate diameters are manufactured and preset to your requirements.

## Guide to quick insert selection

### Uncoated DC, BC, AC

Non ferrous alloys.  
Where a sharp cutting edge is required.

### TiN coated DCT, BCT, ACT

High cutting data. Long tool-life.  
Not suitable for aluminium.

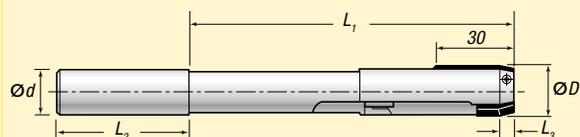

### Cermet DCC, BCC, ACC

For steel and grey cast iron.  
High cutting speed. Durable. Wear resistant.  
Other coatings can be offered on request.

## RD, RA and RB

## Typ 507 Reamer

Solid reamer, left hand spiral 8-10°, extreme differential pitch. Solid carbide tip 6-11 mm, brazed flutes Ø 12-40 mm. Grade ISO K10. DIN8094 Form B.

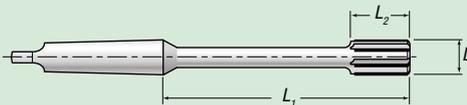

## Typ 507C Reamer

Solid reamer, left hand spiral 8-10°, extreme differential pitch. Solid carbide tip 6-11 mm, brazed flutes Ø 12-40 mm. Grade ISO K10.

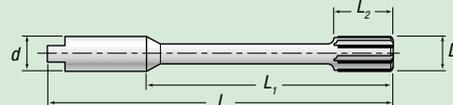

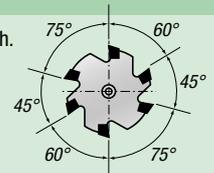

## Typ 509 Reamer

Solid reamer, straight flutes, extreme differential pitch. Grade ISO K10. DIN 8051 Form A.

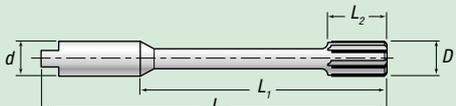

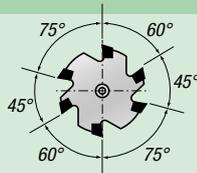

## Typ 509C Reamer

Solid reamer, straight flutes, extreme differential pitch. Grade ISO K10.

## Typ 509CC Reamer

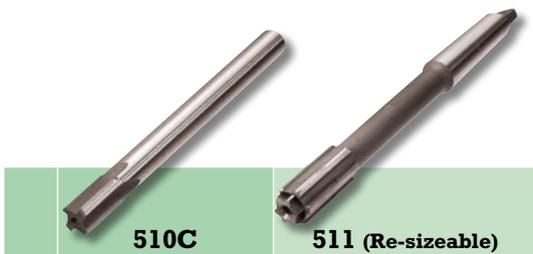

Solid reamer, straight flutes, extreme differential pitch. Cermet: high cutting speed and wear resistance in steel and cast iron applications. The optimum solution when the cutting conditions are stable.

## Common features:

- Reamers are stocked in tolerance H7 and also semi-finished for quick conversion to customers' requirements.
- Differential pitched flutes, for round holes and elimination of vibration.
- Lapped flutes for a better surface finish.

520

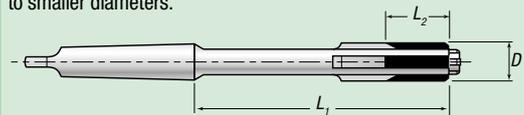

522

## Type 511 Reamer

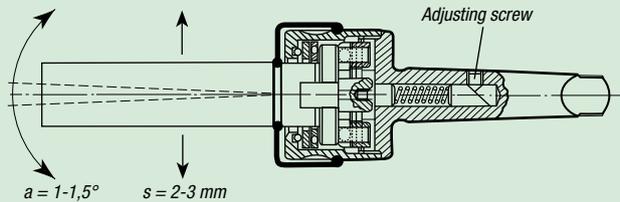

Re-sizeable reamer, straight flutes, differential pitch, for through holes. Grade ISO K10. The expanding reamer can be resized to offset wear by driving the expansion plug further into the reamer. Resizing can normally be done 2-3 times with regrinding. Driving the plug 1 mm further into the reamer will increase the diameter by 0,033 mm. Note: Type 511 reamer cannot be resized to smaller diameters.

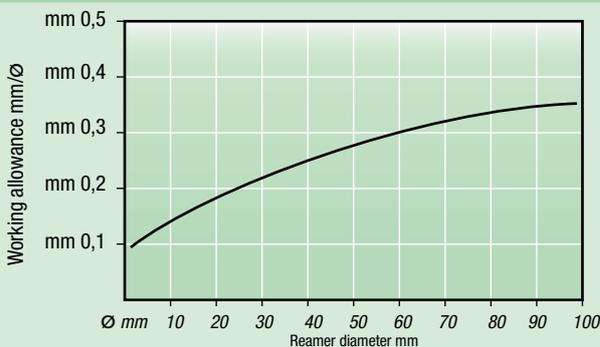

## Floating holders for reamers

These have been designed to compensate parallel and angular mis-alignment of the reamer and the workpiece. Using a floating holder for reaming will improve surface finish and the life expectancy of the reamer.

The stiffness can be adjusted by a screw to obtain a perfect balance to compensate the weight of the reamer. This is of utmost importance when the machine spindle works horizontally.

## Working allowance

# Rotating and fixed precision centres – carbide tipped

## Carbide tipped Rotating centre type 609

Rotating centre type 609 is excellent for applications such as hard turning, where you want a steady operation with a minimum of heat spreading. 609 is a high quality and tough centre that Granlund Tools has a long going experience of manufacturing. We also use our rotating centre in our own production.

- Roundness of 0,002 mm
- Extra long tip allowing more space for machining
- Grinded house and spindle in hardened steel
- High tolerance ball bearings
- Fluid resistant

Part No.	Shank MK	D mm	d mm	L mm	L1 mm	L2 mm	L3 mm
609-MK2	2	46	19	145	35	45	65
609-MK3	3	60	25	183	45	55	83
609-MK4	4	68	27	216	50	60	106
609-MK5	5	80	34	260	55	70	135

Load table for type 609							
Shank MK	Axial preass-ure kg	r/min					
		40	200	400	1000	2000	4000
Radial load – kg							
2	600	240	160	120	90	70	50
3	950	500	340	270	200	160	130
4	1300	1000	600	480	350	280	220
5	1700	1400	800	640	470	380	300

The loading values has been calculated with a high safety factor and are calculated at a runtime of 2500 hours. At lower runtimes, these values can be exceeded. Please contact your Granlund representative if you need more information.

# THUNDER drill for HARDOX

T80 is a solid carbide drill with internal coolant supply and a drill bit specially developed for drilling in HARDOX™. T80 also has a special coating for optimum performance. T80 stands for maximum recommended speed in HARDOX™ 500 (80 m/min).

With T80 and the HD drill Granlund Tools is able to offer a complete tool palette for drilling, counterboring and counter-sinking in HARDOX™. This is possible together with the existing "H"-insert for our indexable counterbores and countersinks WHV and KV.

# Spirabor System

Interchangeable within the same system size

**GRANLUND**  
Tools

Granlunds spirabor is a flexible and cost effective tool system for drilling large holes in different types of metal. E.g. Steel, Cast iron, Cast steel.

A complete Spirabor consists of a spring steel holder, a cutter head, a roller pilot bush and a retaining pin.

Cutter head sizes  $\varnothing$  32–100 mm are standard Specials up to  $\varnothing$  200 mm can be offered.

The diameter range  $\varnothing$  32–100 is divided into seven groups 11–17. As described in the table (right) several diameter cutter heads can be used within the same group in each group.

Granlund Tools balancing stands for balancing of grinding wheels. Our balancing stands are also excellent for balancing axles, propellers, etc.

The balancing stands are manufactured for highest precision and accuracy when balancing. A good balanced grinding wheel results in less wear on the machine, a better grinding result and of course longer life of your grinding wheel.

- Harded and ground balancing discs are run on ball bearings.
- Suitable for static balancing of grinding wheels, axles and other rotating machine elements.

Part No.	Max. diameter of grinding wheel with balance Ø 25 mm	Minimum and maximum length for balancing*	Loading range
500	540 mm	80 - 500 mm	0,3 - 500 kg
800	810 mm	100 - 800 mm	0,3 - 700 kg

\* Longer workpieces may be balanced with longer guiding bars.

## Instruction for balancing of grinding wheels

### General

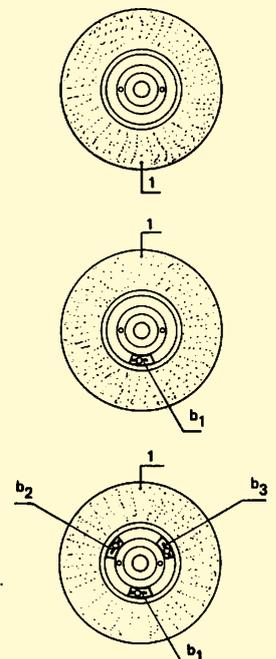

Grinding wheels that are used for fine grinding, should be well balanced. If the wheel is unbalanced, vibrations will occur and cause a poor surface finish. The bearings in the grinding machine will also be affected and in worst case damaged.

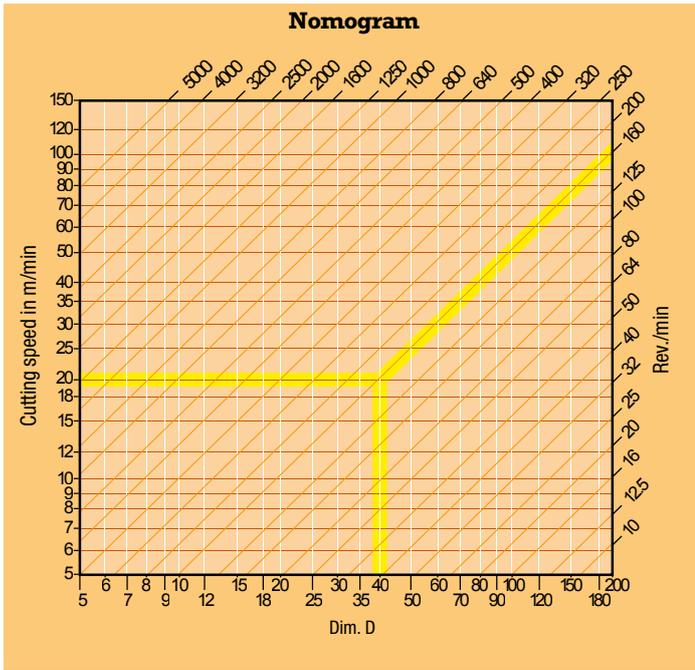

### Control of the grinding wheel

Check if wheel is broken by knocking on a freely hanging wheel. If the tone is clean, the wheel is intact.

### Balancing

1. Remove the balancing weights from the centre of the wheel.
2. Put the wheel on a balancing axle and place it in the balancing stand.
3. Let the wheel swing back and forth until it stops. Mark the bottom part of the wheel with a chalk stick (1).
4. Place one of the weights (b1) on the opposite side, making the wheel rotate 180 degrees.
5. Thereafter put the weights b2 and b3 uniformly in relation to b1.
6. Move the weights b2 and b3 gradually from each other until the wheel stops to swing. The wheel is now balanced.

## Troubleshooting

	<b>1 Ovality</b>	Reamer off centre or deformed workpiece due to poor fixture of workpiece.		<b>6 Retraction marks</b>	Back taper too large, or reamer off centre.
	<b>2 Deformed hole</b>	Too high feedrate in thin walled workpiece or poor fixture of workpiece.		<b>7 Too large diameter</b>	Adjusted diameter too large, poor fixture of workpiece.
	<b>3 Curved hole</b>	Axial misalignment of blade.		<b>8 Vibrations at entry</b>	Feedrate too low.
	<b>4 Vibration marks</b>	Too low feedrate or back taper too small.		<b>9 Tapered hole</b>	Reamer off centre, back taper too small.
	<b>5 Poor surface finish</b>	Too high cutting speed, poor coolant pressure, wrong coolant type or poor location of blade.		<b>10 Pick up on pads</b>	Wrong or too weak coolant mixture.
