

ICE PACK XL

ICE PACK XL

your crushed or dry ice alternative

ICE PACK XL is InterFresh Concepts' leading product for temperature controlled transport in a box. The flexible gel ice is a great alternative to dry ice or crushed ice. It keeps your fresh fish fresher whilst in transit. At the point of destination, your fish looks perfect, no browning of gills, no frost damage, no markings, no melt water.

ICE PACK XL is a durable product. Shipped in dry form, one box weighs 13 kg. Putting into water and a freezer on location activates ICE PACK XL. One box of ICE PACK XL sheets turns into 500 kg of gel ice. It has the same cooling capacity as 700 kg of crushed ice. ICE PACK XL saves on both transportation and storage costs. Changes in airfreight regulations demand cooling alternatives.

ICE PACK XL is a proven alternative. No drip water. When thawing, water evaporates directly or is bound to the gel. 800 grams IcePackXL equals 1,2 kg of crushed ice in both cooling time and capacity. Saving 30% on weight, without compromising on cooling capacity!

ICE PACK XL is reusable. It is environmentally safe and consists only of EC/FDA food approved quality components. The product is manufactured according to the latest EC food packaging regulations.
