c-Go II PC/SMARTPHONE ANALYSIS SOFTWARE

NEW

c-Go II battery charger with Bluetooth for reading via smartphone or PC

Are you experiencing problems with your battery or charger but have no idea what's causing them?

The c-Go II battery charger stores the charging history of the last 1000 charges, allowing for a quick and accurate analysis of reasons such as declining battery capacity and/or lifespan. This charger's charging history can be accessed via Bluetooth on a smartphone or PC. It's also possible to adjust the charging current/curve and monitor the current charging process.

This allows a technician to focus their work more effectively, reducing the number of batteries and chargers that are unnecessarily replaced.

Bluetooth®

POSSIBILITIES

1) Read out cumulative data, software version, settings, error history, charging table
2) Automatic analysis of the data with charger test
3) Change charging current/charging curve in the charger
4) Saving data to file
5) Printing the data
6) Deleting cumulative data and history
